

### **AMENDMENTS TO THE CLAIMS**

1. (Original) An agrochemical concentrate having a continuous water-containing single phase characterised in that said continuous phase also comprises an oil-based adjuvant and a hydrotrope capable of solubilising said adjuvant in said continuous phase.
2. (Original) An agrochemical concentrate as claimed in claim 1 where the oil-based adjuvant is present at a concentration of greater than or equal to 10% of the agrochemical concentrate.
3. (Currently Amended) An agrochemical concentrate as claimed in claim 1 ~~or 2~~ which contains a second phase dispersed in the continuous single phase.
4. (Original) An agrochemical concentrate as claimed in claim 3 where the second phase is a solid.
5. (Original) An agrochemical concentrate as claimed in claim 3 where the second phase comprises a water-immiscible liquid.
6. (Original) An agrochemical concentrate as claimed in claim 3 where the second phase is micro-encapsulated.
7. (Original) An agrochemical concentrate as claimed in claim 3 where the second phase is a micro-emulsion.
8. (Original) An agrochemical concentrate as claimed in claim 4 which contains a third phase comprising a water-immiscible liquid dispersed in the continuous single phase.
9. (Original) An agrochemical concentrate as claimed in claim 2 comprising an agrochemical dissolved in the continuous phase.

10. (Currently Amended) An agrochemical concentrate as claimed in ~~claim 4, 5, 6 or 7~~  
claim 3 where the second phase comprises an agrochemical.
11. (Original) An agrochemical concentrate as claimed in claim 8 where the second phase  
comprises an agrochemical or the third phase comprises an agrochemical or both  
these phases each comprise an agrochemical which may be the same or different  
agrochemicals.
12. (Original) A continuous oil phase in which is dispersed an agrochemical concentrate as  
claimed in claim 1.
13. (Original) A process for the manufacture of an agrochemical concentrate according to  
claim 1 where the continuous phase is prepared first and then any subsequent  
processing takes place in that said continuous phase.
14. (Original) A process for the manufacture of an agrochemical concentrate according to  
claim 4 which comprises milling the solid in water, in the presence of the oil-based  
adjuvant and the hydrotrope, optionally in the presence of a dispersant system.
15. (Original) A method of using an agrochemical concentrate according to claim 1  
whereby the concentrate is diluted in a spray-tank of water.
